-----
Welcome to puppeth, your Ethereum private network manager

This tool lets you create a new Ethereum network down to
the genesis block, bootnodes, miners and ethstats servers
without the hassle that it would normally entail.

Puppeth uses SSH to dial in to remote servers, and builds
its network components out of Docker containers using the
docker-compose toolset.
-----

Please specify a network name to administer (no spaces, hyphens or capital letters please)
> poca

Sweet, you can set this via --network=poca next time!
